

Blockchain in Finance

(part of Candidate CIP®, CIP®)

This course is ideal for those who want to acquire functional knowledge on Blockchain technology and how it can be applied in Finance. The course is a practical, non-technical introduction to Blockchain that will explain the added value to the Financial system while not overlooking the challenges and disadvantages.

The learning concept couples directly the theoretical knowledge with practice, using real-live examples and recent events. In addition, this course forms part of the CIP program.

Training Method

- Prior to the 1-day course, the participant will receive some study materials. In order to be able to participate at the fullest during the course and to achieve optimum results, the participant is required to study these materials before the course starts;
- After a 1-day intensive course where theory is illustrated with practical examples, exercises and current events, from the perspective learning-by-doing, the participant will practise some cases and review the results directly with the trainer;
- The course is ended with an exam. Once the participant passes the exam, he/she will receive the CIP certificate for Blockchain in Finance.

Topics

During the course Blockchain in Finance the following topics will be treated:

- **Blockchain Basics**
- **Smart Contracts**
- **Application of Blockchain in Finance**
- **Challenges in Blockchain**
- **Key takeaways for your daily work**
